

Rosetti Marino Saves Time and Money by Automating Isometric Production

SMARTPLANT® SPOOLGEN® PRODUCES SPOOL DRAWINGS FOR THE WORKSHOP MORE QUICKLY AND EFFICIENTLY

THE CHALLENGE:

Rosetti Marino is comprised of its main fabrication yards in Ravenna, Italy, and two engineering subsidiaries: Fores Engineering, which manufactures and integrates process control and automation systems, and Basis Engineering, which provides multidisciplinary engineering services for the oil, gas, and petrochemical industries.

When a new contract arrives, Basis Engineering uses Intergraph's PDS®, the market-leading 3D plant design system, to design how the project should be constructed. The system produces piping isometric drawings, which are then sent to the Rosetti fabrication yard.

"We used to manually rework the engineering isometrics to add fabrication information such as weld numbers and line information," said Claudio Antonellini, Rosetti's engineering manager. "But this was time-consuming and error-prone."

THE PROJECT OBJECTIVES:

- Increase data accuracy
- Speed project completion
- Automate work processes

THE SOLUTION:

Rosetti Marino won a contract with Agip, an Italian automotive gasoline and diesel retailer. Rosetti Marino decided there must be a better method of producing spool drawings for the workshop. One of Italy's leading software resellers suggested that Rosetti Marino try SmartPlant® Spoolgen®.

SmartPlant Spoolgen is specifically designed for piping fabricators who need to add fabrication and construction information to isometric drawings generated from plant design systems. Fabricators can use SmartPlant Spoolgen to easily split isometric drawings into spools for delivery to the workshop, and the system will automatically generate all necessary drawings and reports.

PROFILE

Name – Rosetti Marino

Web site – www.rosetti.it

Rosetti Marino provides solutions and services to some of the biggest players in the oil and gas industry. With its strong engineering and project management capabilities and state-of-the-art fabrication facilities, Rosetti designs, procures, and constructs a wide range of fixed offshore platforms, process plants, and ships.

Focusing on process packages, pressure vessels, and shipbuilding to meet the demand of both mature and emerging markets, the company operates out of Rosetti Marino's original location in Ravenna, one of Italy's leading commercial ports on the north Adriatic Sea. Support offices are based in Croatia, Portugal, Kazakhstan, and Russia.

KEY BENEFITS:

- Is simple to use
- Eliminates errors and rework through data consistency
- Automatically generates drawings and reports
- Saves tremendous amount of time
- Provides rapid return on investment

PRODUCTS USED:

- PDS
- SmartPlant Spoolgen

SmartPlant Spoolgen provides a fast return on investment, is simple to use, and requires minimal training. The product significantly reduces:

- Labor-hours
- Manufacturing costs
- Project schedules
- Rework
- Construction errors

Agip carried out the detailed design of the plant and sent its IDFs directly to Rosetti Marino's fabrication yard electronically. SmartPlant Spoolgen was used to create shop isometrics and a host of valuable reports, such as:

- Feasibility analysis
- Quantity reports for invoice preparation
- Reports to feed company welding register

"Our users like the software," says Claudio. "And the benefits it brings are great."

"Now we're able to automate spool shop isometrics instead of producing them manually," continued Claudio. "SmartPlant Spoolgen has saved us significant amounts of time and provided enormous cash savings."

ABOUT INTERGRAPH

Intergraph is the leading global provider of engineering and geospatial software that enables customers to visualize complex data. Businesses and governments in more than 60 countries rely on Intergraph's industry-specific software to organize vast amounts of data into understandable visual representations and actionable intelligence. Intergraph's software and services empower customers to build and operate more efficient plants and ships, create intelligent maps, and protect critical infrastructure and millions of people around the world.

Intergraph operates through two divisions: Process, Power & Marine (PP&M) and Security, Government & Infrastructure (SG&I). Intergraph

PP&M provides enterprise engineering software for the design, construction, and operation of plants, ships, and offshore facilities. Intergraph SG&I provides geospatially powered solutions to the defense and intelligence, public safety and security, government, transportation, photogrammetry, utilities, and communications industries.
