

Technical Project Manager (PP&M 02)

Job Summary:

To undertake technical project management of selected customer implementations of Intergraph's SmartPlant Enterprise schematic design, 3D modelling and information management applications. To also have ownership and oversight of all such projects undertaken in the Benelux region.

Reports to:

PP&M regional technical management.

Based:

The office base will be at the Intergraph PP&M office at Hoofddorp, The Netherlands. The applicant preferably lives within 40 minutes travel time of Hoofddorp office or is prepared to relocate to that area. Travel to and work assignments customer sites should be expected.

Responsibilities:

The job role will involve technical project management of implementation of Intergraph's SmartPlant Enterprise suite of engineering and information management applications. Technical project management typically includes scope definition, resource management, project execution, management of change, to delivery and customer acceptance. Intergraph implementations are undertaken as formal projects adhering to Intergraph's standard project methodology. The successful candidate will be working simultaneous on several technical projects or customer adoption programs.

As a lead project manager for the Benelux team the successful candidate would also be required to have oversight and ownership of all regular projects executed in the Benelux region. This part of the job role would involve working with the Intergraph Benelux sales organisation, contracts and other services departments, in order to affect all projects delivery to be on time, to quality and within budget.

Skills:

The right candidate should have past experience of project managing commercial applications implementation projects or programs successfully. Also the right candidate will possess very strong people management and work organisation skills.

The candidate must also be able to demonstrate excellent communication skills, both written and oral, with the confidence to present at internal and customer project meetings. Also the successful candidate must have the ability to complete defined work assignments on time and to Intergraph defined standards and quality, working equally well as part of the team or alone.

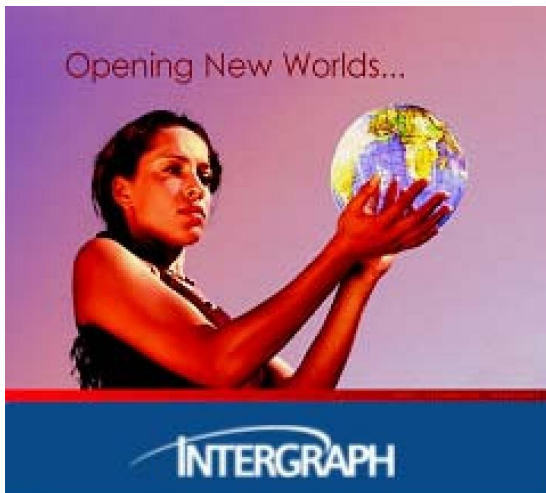

Qualifications:

Degree or equivalent higher level education qualifications are expected. Plant design and operation industry experience would be considered an advantage. Proficiency or training certificates in relevant project management practise and methodology is desirable. The staff grading and re-numeration will be subject to actual skills and experience.
