Priority Dispatch Corp. and Intergraph Enable UK Ambulance Services to Reduce Impacts of System Updates

Priority Dispatch Corp. (PDC) and Intergraph Successfully Deploy Intergraph's I/CAD computer aided dispatch system within PDC's Test and Deployment Lab

BRISTOL, United Kingdom, December 10th, 2007 – Priority Dispatch Corp. and Intergraph today announced the successful deployment of Intergraph's I/CAD Computer Aided Dispatch (CAD) system in the Medical Priority Dispatch System (MPDS) Test and Deployment Lab at PDC's offices in Bristol.

Under its NEMA agreement with the NHS Ambulance Trusts, PDC provides a dedicated UK facility for users to test the latest versions of the MPDS software. The Lab allows UK Ambulance Trust personnel, PDC and the NEMA Beta Group to test and document the impact of deploying new versions of PDC's ProQA and AQUA software on their systems.

The ability to fully evaluate the impact of system updates helps identify and minimise negative issues that could arise before going "live" in medical 999 control rooms. Furthermore, it will speed up the ability of the NHS Trusts to accept and deploy the latest dispatch medical science and instruction while continuing to increase the benefits of its services to the citizens of the United Kingdom. The lab will also be used to document and roll out any new protocol versions issued by the International Academy of Emergency Dispatchers.

The successful installation of I/CAD within the Test and Deployment Lab will allow the NHS Trust Ambulance users to investigate and document any changes or advancements in medical dispatch sciences on their Intergraph system.

About Priority Dispatch Corp UK- Ltd

Priority Dispatch Corp™ has been the leading public safety provider for police, fire and medical emergency dispatch protocols worldwide for over 28 years in partnership with the National and International Academies of Emergency Dispatch™. Over 3,000 communications centres and 45,000 dispatchers in more than 23 countries use the company's software, training and services to provide the best emergency care possible to more than 600 million people a year.
