UNDERPINNING SYSTEM INTEGRATORS

Intergraph UK has a long established record of partnering with and supporting system integrators, working closely with them to deliver projects primarily in public safety, defence, transport and utilities.

In addition to project support, Intergraph UK offers a sustaining package to system integrators to enable them to maintain a competitive advantage with access to industry expertise, support, consultancy and training.

EXPERIENCE

Defence – Working with the Joint Forces Intelligence Group (JFIG) and prime system integrators to maintain and develop the UK Geospatial Intelligence (GEOINT) capability delivered to national, strategic and tactical decision makers.

Public Safety – Working with system integrators to deliver command and control systems to Police, Ambulance and Fire services ensuring these critical services dispatch the right resources to handle emergency incidents and routine calls.

Government – Working with national mapping agencies for implementation and delivery of software and services.

Transport – Working with specialists in Enterprise Asset Management to deliver the geospatial foundation for the efficient monitoring and scheduling of work to rail networks.

Utilities – Working with system integrators to help national and regional utility companies deliver services safely, within industry regulations and with limited resources in a competitive environment.

OFFERING

Domain Skill sets – made up of ex-services, public sector, industry and academic backgrounds, mixed in with IT specialists.

Consultancy Knowledge – experienced and trained geospatial consultants, with ITIL and PRINCE2 certification.

Solution Expertise – unique expertise in critical systems, across national mapping, defence and public bodies.

Ad-hoc or embedded – on demand and scheduled consultancy, training and support from experienced Intergraph engineers to maintain the system integrators’ knowledge and lessen the effort to respond to customer requirements.

Production – in-house data production, of base and specialised geospatial products.

Development – in-house software development, training, configuration and solution building.
SOLUTION FOCUSED

Drawing from our solid engineering heritage and open standards architecture, we bring together people, data, and systems for faster, more accurate and smarter decision making. Our geospatially powered solutions transform vast amounts of complex data into actionable intelligence, protecting UK and global interests and supporting the customer. Our solutions and IT services help build and manage geospatial databases, produce operational information from data, manage critical enterprise content, analyse and fuse geospatial intelligence, manage supply systems, and ensure the security of infrastructure and installations worldwide.

WHY INTERGRAPH?

Intergraph’s portfolio of services and solutions provides integrated geospatial systems, harnessing the traditional domains of GIS, remote sensing, photogrammetry, and mapping with applications across the enterprise.

Sparked by change and fuelled by data and information captured from a variety of sensing devices, raw source content is fed through the geospatial information life cycle, processed with geospatial software, shared rapidly and ultimately delivered on-demand as reliable and actionable information to users in the office, field, and across the globe in real time. Intergraph’s software addresses needs across government and transportation, defence and intelligence, utilities and communications, and public safety and security organizations.

As change happens, users in these critical industries can derive real-time information to protect lives, property, and infrastructure. With leading technologies, and market knowledge, Intergraph can help you fulfill the increasing geospatial information demands from your customers.

With experience in nationally critical geospatial projects, Intergraph (UK) Ltd has a pedigree of delivering to requirements, on time. Utilising quality procedures through a project management office, highly motivated and able resources deliver projects to meet and exceed customer expectations.

Intergraph reinvests 12% of revenue annually into research and development to maintain its leadership across industries.
STRUCTURE

Intergraph Security, Government & Infrastructure (SG&I) provides smart, location-based solutions for critical global challenges. By delivering complete, current and accurate information, we help organizations make smarter decisions.

Intergraph (UK) Ltd has over 120 permanent staff, employed predominantly in the Swindon office. The SG&I division of Intergraph (UK) Ltd has more than 70 permanent staff. Intergraph also supplements its permanent staff through the use of contractors for specific projects.

While all may play a role in project delivery, the focus tends to be on ensuring the necessary technical engineering expertise is available. Intergraph (UK) Ltd has a core team of technical staff with geospatial/imagery expertise and who are cleared UK Nationals, with skills particularly relevant to the customers’ requirements.

Intergraph (UK) Ltd can also call on expertise in defence and further staff from EMEA or Global resources if required. In particular, further specialist defence expertise is available in Germany, Italy and the US.

Intergraph Corporation, the parent company of Intergraph (UK) Ltd, has approximately 4500 employees worldwide with over 1400 located in EMEA (Europe, Middle East and Africa). The Security, Government and Infrastructure division (SG&I) of Intergraph Corporation has more than 900 staff.

Intergraph manages product direction and strategy through a central SG&I Product Centre, which enables it to address common demands across the worldwide user base. The Product Centre includes key staff with industry experience, who help shape solutions direction, and thus provide the ultimate fall back for software support issues.

With almost 500 employees, Intergraph Government Solutions (IGS) and its Geospatial Solutions division serves US federal customers with staff cleared to at least US Secret, with most having TS/SCI. This group provides system engineering, software development, product development, workflow design, configuration and installation, training, and project and program management. Additionally the Geospatial Solutions division is able to draw on expertise from other IGS divisions for data production services, IT, and certifications.

Intergraph is part of Hexagon AB, which is a leading global provider of information technologies that drive dynamic decision making across industrial and geospatial applications. Hexagon is a constant presence within the ever-changing technology landscape, providing innovations that infuse relevance and knowledge into business processes that create a better and smarter world.

VISION – Hexagon aspires to play a leading role in the effort to solve the challenges our world is facing by providing groundbreaking information technologies that make a positive and lasting impact.

MISSION – Hexagon is dedicated to delivering actionable information through information technologies that enable customers to shape smart change across diverse business and industry landscapes.
